

IOS ASSIGNMENT.

Let's see what you are made of.

Hi,

In the next couple of hours you will be working on a practical assignment. A real example of something you could be working on when you join us. This will give you a good understanding of what it is like working for Coolblue. Good for you and good for us.

Goal

The goal of the assignment is to give us insight into how you solve problems and what kind of choices you make when writing code. In the meantime you get a bit of experience in creating a shopping app.

Shopping app

The assignment consists of you actually building an app that can be used to search for products that Coolblue sells.

What will you be doing?

You'll build a very simple app that implements the first User Story in the backlog:

As a user, I want to search for a product, so that I can scroll through a list of products and find something interesting to buy.

Non-functionals

We also have some non-functional requirements, which you should take into account when developing the application:

- You use Swift and SwiftUI.
- You share your code with us in a Github repository.
- You use known design patterns to build a proper architecture.
- You add Unit and UI tests.
- You use Swift Package Manager (SPM) if you need them.
- You use some images to make it a bit visual.
- You can use AI assisted development tools. Make sure you understand the code you are shipping very well, we will ask you about it.

We have a very simple API that you can use for the assignment. It has one endpoint you can use to search for products.

[Mocked search API](#)

Please notice that the information is mocked. You'll get the same information back using any search term.

Your colleagues

You will have Coolblue employees available if you have any questions. We will be available for all your questions during working hours (9:00 - 17:30 CET). We might be unavailable for small periods of time though. This probably means we're out playing a game of table tennis or getting a bite to eat, which means we will be back soon :D

Specific contact details for them will have been supplied to you. You can always contact us, even outside of working hours, we'll answer if we can.

Contact details:

Kate: kate.orlova@coolblue.nl

Wayne: wayne.delport@coolblue.nl

Fer: fernando.rowies@coolblue.nl

Time schedule

This is a timeboxed assignment: spend around 4 hours on this assignment! We just want to have an impression of how you work, so 4 hours of work should be enough for that.

It's about time you actually write some code.

Good luck! And if you have any questions, don't hesitate to ask, we'd appreciate it!
